# How to Embed your Kick Livestream

Embedding your kick livestream on your website, how-to embed your live stream, kick.com livestream iframe embedding

Updated over 2 years ago

Table of contents

Welcome to the Kick Streaming Player embedding documentation. With our simple embedding system, you can easily add your live stream to your website using an iframe, giving your audience the convenience of watching your stream directly from your site. This guide will walk you through the steps you need to follow to embed the Kick player on your website.

## Basic Embedding

To embed the Kick player, insert the following iframe code into the HTML of your website:

```
<iframe
  src="https://player.kick.com/YOUR_USERNAME"
  height="720"
  width="1280"
  frameborder="0"
  scrolling="no"
  allowfullscreen="true">
```

```
</iframe>
```

Replace **YOUR\_USERNAME** with your actual Kick username.

## Customizing the Player

Kick's streaming player offers several options you can use to customize the player to your preference. These options are added to the URL of the player in the iframe as query parameters. Here's how you can customize your player:

### Autoplay

To make the player start automatically, set the **autoplay** parameter to **true**. If you want to disable autoplay, set **autoplay** to **false**. The default value is **false**.

```
<iframe
  src="https://player.kick.com/YOUR_USERNAME?autoplay=true"
  height="720"
  width="1280"
  frameborder="0"
  scrolling="no"
  allowfullscreen="true">
</iframe>
```

### Mute

To mute the player, set the **muted** parameter to **true**. If you want to allow sound, set **muted** to **false**. The default value is **false**.

```
<iframe
  src="https://player.kick.com/YOUR_USERNAME?muted=true"
  height="720"
  width="1280"
  frameborder="0"
  scrolling="no"
  allowfullscreen="true">
```

```
</iframe>
```

## Allow fullscreen

The fullscreen option is enabled by default on all streams. This means viewers can switch the stream to fullscreen mode. If you wish to disable this option, set the **allowfullscreen** parameter to **false** in the URL and remove **allowfullscreen="true"** from the iframe.

```
<iframe
  src="https://player.kick.com/YOUR_USERNAME?allowfullscreen=false"
  height="720"
  width="1280"
  frameborder="0"
  scrolling="no">
</iframe>
```

## Using Multiple Parameters

You can also combine multiple parameters. When using multiple parameters, separate them with the **&** symbol.

For instance, to embed a player that is muted and does not allow fullscreen, you can use the following code:

```
<iframe
  src="https://player.kick.com/YOUR_USERNAME?muted=true&allowfullscreen=false"
  height="720"
  width="1280"
  frameborder="0"
  scrolling="no">
</iframe>
```

## Conclusion

With these simple steps, you can easily embed the Kick Streaming Player into your website and customize it according to your preference. This will make it easier for your

audience to access and watch your live streams directly from your website.
